

LINKZEN TECHNOLOGY

AND RESEARCH CENTRE

PRD : Billing Software

Product Overview :

LinkZen Billing Software is an all-in-one, cloud-based ERP and billing solution tailor-made for Indian MSMEs, retail setups, manufacturers, and service providers. The application aims to simplify core business transactions, automate accounting compliance (GST/E-way billing), streamline inventory control, and deliver real-time data-driven insights through an intuitive multi-platform experience.

- **Tagline: Simple Billing. Powerful Business. / Bill Smarter. Manage Better. Grow Faster.**
- **Core Pillars: 100% Secure, Cloud-Based, GST Compliant, Accessible Anywhere.**
- **Contact/Support Anchor: 6002552415**

1. Target Audience & Market Fit ("Ideal For")

The platform is built to support both **B2B & B2C** business models across the following segments:

- Retail Shops: Point of Sale efficiency, barcode scanning, and fast consumer invoicing.
- Wholesalers & Distributors: Bulk ordering, credit limit controls, and multi-location logistics.
- Manufacturers: Raw materials tracking, Bill of Materials (**BOM**), and production staging workflows.
- Service Providers: Contract billing, Annual Maintenance Contracts (**AMC**), and subscription timelines.
- Online Sellers: E-commerce marketplace management and stock synchronization.

2. Core Functional Modules (Line-by-Line Technical Breakdown)

01. Easy Billing

- Quick Invoice Creation: Low-latency layout to generate transactional bills under 10 seconds.
- Multiple Invoice Types: System support for standard Tax Invoices, Bill of Supply, Cash Memos, and Delivery Challans.
- Estimate & Quotation: Create and send commercial quotes to leads, with a one-click conversion mechanism into active invoices.
- Proforma Invoice: Draft provisional bills for advance payments before delivery of goods or services.

02. GST & Taxation

- GST Invoice: Compute CGST, SGST, IGST, and UTGST calculations automatically based on transaction type (Intrastate vs. Interstate).
- Tax Calculation: Automatic slab assignments (**\$0\%\$, \$5\%\$, \$12\%\$, \$18\%\$, \$28\%\$**) with embedded composition scheme toggles.
- HSN/SAC Management: Dynamic database search and mapping of HSN (Harmonized System of Nomenclature) and SAC (Services Accounting Code) with predefined tax codes.
- GSTR Reports: Automatic compiling and generation of standard compliance files for **GSTR-1, GSTR-2, GSTR-3B, and GSTR-9**.

03. Inventory Management

- Stock Tracking: Live tracking of stock levels (Available, Committed, In-Transit) updated dynamically with every sale and purchase.
- Low Stock Alerts: Automated in-app notifications and daily summary emails when items fall below custom minimum thresholds.
- Batch & Serial No.: Full traceability support for perishable goods (expiry dates, batch tracking) and electronics (unique serial numbers).
- Stock Adjustments: Tooling to manual reconcile stock differences arising from damage, theft, or physical audit corrections.

04. Customer & Supplier

- Customer Management: Directory storing interaction logs, contact data, active balances, and historical purchases.
- Supplier Management: Procurement directory managing vendor profiles, open purchase orders, and payment records.
- Payment Terms: System configuration for custom credit windows (e.g., Net 15, Net 30, COD).
- Outstanding Tracking: Unified ledger reporting current payable and receivable balances across all entities.

05. Payments & Receipts

- Payment In / Out: Workflow logging for both inbound customer revenue receipts and outbound operational vendor payouts.
- Multiple Payment Modes: Payment gateway integrations supporting Cash, UPI, Credit/Debit cards, Net Banking, and Cheques.
- Receipt Voucher: Automatic generator for payment acknowledgment receipts, instantly distributable via digital channels.
- Pending Dues: Specialized dashboard flagging overdue invoices alongside accumulated late fee metrics.

06. Expense Management

- Add & Track Expenses: Logging tools for day-to-day operational expenditures (e.g., utilities, rent, office supplies).
- Expense Categories: Customizable tracking nodes to classify costs into direct, indirect, capital, or operational buckets.
- Attach Bills: Document scanning capability allowing users to upload images or PDFs of physical vendor receipts for auditing.
- Auto Expense Reports: Periodic visual charts analyzing burn rates and pinpointing cost-saving opportunities.

07. Bank & Reconciliation

- Bank Accounts: Support for linking and monitoring corporate current accounts, savings records, and cash-in-hand logs.
- Payment Reconciliation: Automated settlement mechanism to map unmatched receipts to corresponding open invoices.
- Cheque Management: Check lifecycle tracker monitoring clearing statuses (Issued, Received, Cleared, Bounced).
- Statement Matching: Automated tool to import bank e-statements (.CSV/.XLSX) and flag entry discrepancies.

08. Reports & Analytics

- Sales & Purchase Reports: Filterable analytical breakdowns sorted by items, timeframes, salespeople, or customer demographics.
- Profit & Loss Statement: Live calculating model showing gross margins, operational overheads, and net yields.
- Balance Sheet: Auto-updating statement displaying Assets, Liabilities, and Equity states.
- Tax Summary: Condensed dashboard showing seasonal net tax liabilities (Output tax liability minus Input Tax Credit).

09. Multi-Branch / Multi-Location

- **Manage Multiple Branches:** Centralized administrative control over separated regional retail or commercial offices.
- **Location-wise Reports:** Isolated P&L, stock assessments, and revenue sheets for individual locations.
- **Stock Transfer:** Internal documentation tracking the secure transport of products from centralized warehouses to regional outlets.
- **Branch Permissions:** Granular administrative gates to restrict store employees from viewing out-of-location performance statistics.

10. Users & Roles

- **User Management:** Administrative portal to invite, suspend, or configure operational accounts for company staff.
- **Role-based Access Control (RBAC):** Presets configuring distinct authorization levels (e.g., Admin, Accountant, Billing Clerk, Store Manager).
- **Activity Logs:** Immutable security trail logging chronological system footprints (who created, modified, or deleted entries).
- **Data Permissions:** Structural access gates blocking down-tier staff from exporting client directories or high-level financial ledgers.

11. Barcode & POS (Point of Sale)

- **Barcode Generation:** In-app engine to generate and print customized product barcodes containing price and SKU metadata.
- **POS Billing:** High-speed, keyboard-optimized interface layout for continuous checkout lines.
- **Scan & Add Items:** Direct peripheral hardware alignment for instant line-item addition via barcode scanners.
- **Touch-friendly Billing:** Adaptive UI components built for tablet screens and integrated touch terminal terminals.

12. E-Invoice & E-Way Bill

- E-Invoice Generation: Direct connection API to the Invoice Registration Portal (IRP) for generating B2B e-invoices instantly.
- E-Way Bill Integration: Instant freight-compliance creation mapping transportation details to active invoices.
- IRN Management: Automatic retrieval, logging, and printing of system-verified Invoice Reference Numbers (IRN) and QR codes.
- Auto Sync with GSTN: Native scheduling engine to automatically report adjustments to the government's Goods and Services Tax Network.

13. SMS & Email Notifications

- Invoice via SMS / Email: Automated delivery of digital transaction links immediately following bill confirmation.
- Payment Reminders: Rules-based transactional alerts sent to customers holding outstanding debts.
- Due Alerts: Advance alerts dispatched to internal staff alerting them to upcoming supplier payment dates.
- Custom Templates: Rich-text communication designer allowing customizable brand styling across automated alerts.

14. Subscription & AMC Management

- Subscription Tracking: Specialized tooling handling recurrent periodic invoicing for service packages or flat-rate retainers.
- AMC Reminders: Automated warnings highlighting the expiration or service milestones of Annual Maintenance Contracts.
- Renewal Alerts: Proactive client-facing text and email workflows prompting service renewals before account suspension.
- Service History: Operational ledger listing every engineering dispatch, support incident, or physical maintenance check tied to an account.

15. Credit Limit & Collection

- Set Credit Limits: Maximum monetary thresholds configurable per client account to curb bad debt exposures.
- Track Receivables: Specialized collections hub tracking Aging buckets (e.g., 0-30 days, 31-60 days, 60+ days).
- Collection Follow-up: Internal notes module to record communication attempts, promises to pay, and automated escalation states.
- Aging Analysis: Data graphs modeling macro collection velocity to pinpoint clients lagging on credit schedules.

16. Document Management

- Upload Documents: Cloud storage attachment utility allowing files to be dragged and dropped into specific profiles.
- Digitize Records: Tools to convert manual bookkeeping logs into structured digital attachments.
- Attach to Invoices: Structural mapping to pin agreements, shipping logs, or quality certificates directly to a transaction.
- Easy Retrieval: Universal structural search index categorized by date, entity tags, or file attributes.

17. Data Backup & Security

- Automatic Backup: Ongoing, automated server backups preventing critical loss from hardware failures.
- Data Encryption: Transport Layer Security (TLS) for data in transit combined with AES-256 safeguards for database rows at rest.
- Secure Servers in India: Strategic hosting infrastructure positioned within domestic borders to respect local data localization laws.
- Role-based Security: Multi-factor authentication mechanisms combined with IP restrictions for administrative endpoints.

18. Mobile App

- Android App: Fully featured native companion app available for distributed teams and independent store owners.
- Create Bills on the Go: Complete system capabilities to generate compliance-ready bills directly from smartphones.
- View Reports: Mobile-optimized real-time delivery of cash flow, sales summaries, and inventory indicators.
- Customer / Supplier App: Extensible customer portal interface where external vendors can review active balances and payment logs.

19. E-Commerce Integration

- Sync Online Orders: Webhook listener framework importing orders from digital channels (e.g., Shopify, WooCommerce).
- Inventory Sync: Two-way sync engine updating digital storefront item availability based on physical store stock counts.
- Order Management: Pipeline monitoring the fulfillment stages from packaging to delivery.
- Marketplaces Supported: Omnichannel connection matrix built out for India's major retail marketplaces (e.g., Amazon, Flipkart, ONDC).

20. Accounting Automation

- Auto Journal Entries: Behind-the-scenes financial engine making corresponding double-entry bookkeeping ledgers automatically.
- TDS Management: Compliance sub-module managing Tax Deducted at Source calculations, rates, and deduction logs.
- Depreciation: Fixed-asset management tool applying consistent Straight-Line or Written-Down Value tax calculations.
- Closing Stock Valuation: Dynamic assessment calculators executing standard FIFO (First-In, First-Out) or Weighted Average pricing logic.

21. Project & Job Management

- Project Tracking: Operational boards matching work timelines to distinct corporate billing profiles.
- Job Costing: Micro-accounting matrices rolling up materials, tools, and labor fees against specific client results.
- Labour & Material: Timesheet logs and stock allocation lists tracked directly within active project accounts.
- Profitability Analysis: Comparative reporting measuring real budget expenditures against early project projections.

22. Production Management

- Bill of Materials (BOM): Multi-tier raw material configurations detailing ingredients, assembly parts, and scrap ratios required for final products.
- Production Planning: Master system calendar managing factory assembly lines and raw resource availability schedules.
- Work Orders: Actionable job floor forms initiating production runs and capturing in-progress metrics.
- Finished Goods Tracking: Automated accounting steps converting consumed raw inputs into trade-ready inventory items.

23. Loyalty & Discounts

- Discount Schemes: Promotion logic engine automating flat deductions, percentage price-cuts, or complex BOGO variants.
- Loyalty Points: Scalable engine rewarding store customers with point additions matching their receipt totals.
- Customer Rewards: Specialized redemption workflow allowing accumulated points to serve as cash-equivalent billing credits.
- Festival Offers: Rules-based scheduler setting target validation dates for holiday marketing campaigns (e.g., Diwali, New Year).

24. Custom Print Templates

- Custom Invoice Design: Visual layout editor allowing quick adjustments to invoice grids, payment terms, and color accents.
- Add Logo & Branding: Clean upload tool positioning custom company brand symbols prominently onto output documents.
- Thermal / A4 Formats: Print optimization switches formatting documents for both 2-inch/3-inch thermal checkout receipts and traditional A4 office sheets.
- Multi-language Support: Structural print engines outputting regulatory documentation in regional Indian scripts alongside English.

25. Support & Training

- Live Support: In-app chat channels paired with direct hotline connections for rapid issue response.
- Video Tutorials: Step-by-step library offering self-paced onboarding guidance for platform settings.
- User Training: Live screen-share onboarding configurations organized to familiarize store staff with new workflows.
- Dedicated Account Manager: High-tier account benefit pairing corporate firms with a single point of technical assistance.

26. Comprehensive Business Overview (Executive Dashboard Analytics)

- Real-time Dashboard: Command center featuring instant readouts of live Sales volumes, net Profits, Stock valuations, and Account Receivables at a glance.
- Business Intelligence: Data-mining visualizations providing predictive purchasing patterns and operational insights.
- Cash Flow Tracking: Detailed trend lines tracking Cash Inflow vs. Cash Outflow alongside a verified Daily Cash Summary.
- Goal Tracking: Target setting modules allowing businesses to map out operational revenue milestones and review ongoing team achievements.
- Business Health: High-level predictive index evaluating balance liquidity, capital health, and debt statuses.

3. Non-Functional & Quality Requirements

Attribute :

Target Metric & Compliance Details

Hosting & Location

Servers physically hosted in India to assure strict compliance with RBI data localization rules and minimize regional network latency.

Data Protection

Enforced End-to-End Encryption (E2EE) for operational security, backed by redundant cloud replication.

Scalability

Cloud-native multi-tenant structure built to seamlessly scale with transactional surges during holiday shopping peaks.

Accessibility

Cross-platform compatibility supporting desktop web browsers, local terminal networks, and Android devices.
